

Jhatpat — Earning Model

How the business earns · Ramnagar and the Jim Corbett belt · 7 Oct 2026 · v4

Bottom line: on this model Jhatpat keeps about **₹52.09** per order and breaks even at about **16 orders/day**. That only holds if customers keep ordering at these fees — see section 6.

1. What the model is

Jhatpat holds no stock. The customer orders in the app, a nearby kirana shop packs the order and a rider delivers it. Jhatpat is the platform in between, so it has no warehouse, inventory or spoilage cost.

2. Rules

Item	Rule
MRP items	Sold at MRP. Jhatpat adds nothing.
Loose items	Listed at the shop's price plus ₹5. The ₹5 is Jhatpat's.
Delivery fee	Small order ₹50 · mid-size ₹25 · free above ₹1,000. Maximum ₹50.
Delivery fee split	Rider 70% · Jhatpat 30%.
Free-delivery orders	Jhatpat pays the rider ₹30 itself.
Handling fee	₹40 on orders up to ₹1,000 · ₹100 above that. All of it is Jhatpat's.

3. Who gets what, by order size

Order	Delivery	Handling	Customer's total fees (% of basket)	Rider gets	Jhatpat gets
Small (below ₹199)	₹50	₹40	₹90 (64%)	₹35.00	₹55.00
Mid-size (₹199–999)	₹25	₹40	₹65 (19%)	₹17.50	₹47.50
Large (₹1,000+)	Free	₹100	₹100 (8%)	₹30.00	₹70.00

Excludes the ₹5 on loose items and the payment gateway cost. "Small order" is taken as below ₹199. Fee % is on that slab's average basket (₹140 / ₹340 / ₹1,200).

4. What is left on an average order

Per order (average basket ₹296)	Amount
Income	
30% of delivery fee	₹9.90
Handling fee	₹41.80
₹5 on loose items	₹5.00
Costs	
Payment gateway	–₹3.71
Rider pay on free-delivery orders	–₹0.90
Left per order	₹52.09

Order mix (assumption): 35% small (₹140), 62% mid-size (₹340), 3% ₹1,000+ (₹1,200). Average delivery fee ₹33, average handling ₹41.80. Assumes 1 loose item per order.

5. Monthly picture

Fixed costs (assumption): Ops / support (1 person) ₹12,000, Marketing (local) ₹10,000, Hosting, SMS/OTP, maps ₹3,000 = **₹25,000/month**.

Orders	Left from orders	After fixed costs
20 orders/day (600/month)	₹31,256	₹6,256
40 orders/day (1,200/month)	₹62,513	₹37,513
75 orders/day (2,250/month)	₹117,212	₹92,212
150 orders/day (4,500/month)	₹234,423	₹209,423
Break-even		16 orders/day

How the number of loose items changes it:

If the average order has	Left per order	Break-even
0 loose item(s) per order	₹47.09	18 orders/day
1 loose item(s) per order	₹52.09	16 orders/day
2 loose item(s) per order	₹57.09	15 orders/day

6. Points to watch

Biggest risk: the fees are very high. On a ₹140 order the customer pays ₹90 in fees, and ₹100 on a "free delivery" order of ₹1,000+. The shop next door sells the same goods with no fees. This model assumes order volume stays the same, which is unlikely at these fees. With handling at ₹9, ₹19.62 was left per order. The new handling fee only earns more if orders fall by less than 62%; a bigger fall means lower earnings than before.

- **The rider gets only ₹17.50 on a mid-size order**, and most orders will be in this slab. That may be too low for longer runs such as Dhikuli or Garjia. If riders do not stay, this slab will need a minimum payout.
- **Keep the loose-item list clear.** The ₹5 should apply only to items with no printed MRP (vegetables, fruit, loose grains).

7. How firm these numbers are

- **Owner's rules:** the full table in section 2.
- **Assumptions:** small-order line at ₹199, order mix, 1 loose item per order, 2% gateway with half the orders paid online, fixed costs, orders per day.
- There is no real order data for Ramnagar yet. Re-run this model once the first 4–6 weeks of real numbers are in. GST and income tax are not included. The app still has the old fees.
